14	AM-75-1	Federation of Young European Greens	Moreover, we cannot undervalue the role of women in the education, training and empowerment of future generations, considering that, in the EU, women not only have higher graduation rates than men but also because there are more women than men working as educators and teachers at all levels of education. It is therefore important to strengthen the educational, academic and investigation areas to raise awareness and impel next generations to action, developing an	<b>From line 74 to 79:</b>  Moreover, we cannot undervalue the role of women in the education, training and empowerment of future generations, considering that, in the EU, <del>women</del> -not only <u>women</u> have higher graduation rates than men but <del>also-because</del> there are <u>also</u> more women than men working as educators and teachers at all levels of education. <del>It is therefore important</del> <u>Therefore, women are key</u> to strengthen the educational, academic and investigation areas to raise awareness and impel next generations to action, developing an	Compromise wording by FYEG and GPEW (AM 14, 15 and 17), still needs to be finalized with Med Net:  "There is a high percentage of women working in education, leading to the responsibility of climate education being placed on them. It is therefore important to strengthen the educational, academic and investigation areas to raise awareness and impel next generations to action, developing an inter- and intra-generational network, so that they can take well-informed and effective action in the future. Education on climate action is key as young children are far more vulnerable to climate-related disasters and associated health risks than any other social group. As such, empowering young people is a priority. Meanwhile, the number of women undertaking technical and scientific education paths is dramatically lower than the number of men, for cultural, social and historical reasons. It is fundamental to fill this gap through encouraging young women and removing any socio-economic barrier of access. However, the role of climate education should not fall solely on any marginalised group who are more exposed to the impacts of climate change, but rather be integrated into community-based learning."	Compromise text agreed by FYEG, GPEW and Med Net:  <b>"There is a high percentage of women working in education, leading to the responsibility of climate education being placed mostly on them. It is therefore important to strengthen the educational and other professional areas to raise awareness and impel next generations to action, developing an inter- and intra-generational network, so that they can take well-informed and effective action in the future. Education on climate action is key as young children are far more vulnerable to climate-related disasters and associated health risks than any other social group. As such, empowering young people is a priority.
